SKILLS

Code & AI Tools
Python & HTML (learning); directs AI coding tools (Claude Code) to build real products

Code Basics
HTML & CSS fundamentals
Python (learning)

3D & Motion
After Effects motion design

Design
Layout & typography, digital graphics, posters, Canva

Build & Make
3D printing, Cricut, Sphero & LEGO robotics

Present & Lead
Deck design, public speaking, storytelling

STRENGTHS

Creative thinking
visual angles that make work memorable

Teamwork
builds with people, not just beside them

Adaptability
adjusts quickly when an approach fails

Presentation polish
finishes projects so they look complete

EDUCATION

Erindale Secondary School
International Baccalaureate (IB)
Incoming, Fall 2026

Intl. Business & Technology (IBT)
Completed

INTERESTS

AI tools, real-time 3D, and product design

Business strategy and visual storytelling

Arjun Sharma

Student Creator · Web, Design & Interactive Projects

PROFILE

Self-directed student creator heading into high school, turning ideas into finished digital products: interactive websites, browser animations, explainers, and presentation decks. Works where technology, business, and design meet, directing AI coding tools to build while owning the idea, design, testing, and presentation. Recent builds include mem, an on-device memory extension, and Shade Route, a shade-aware walking planner. Two-time hackathon winner and a National Finalist at Samsung Solve for Tomorrow (2025).

SELECTED PROJECTS

SECOND LOOK

1st place, PeddieHacks · Live marketplace data

A secondhand sports-gear marketplace built on real listings from Poshmark, SidelineSwap, and GearTrade, with honest statistics computed from that live data.

GhostBus

Best Video, RLC Hacks · Live transit data

A transit accountability engine that records the scheduled buses that never arrive, turning a silently broken promise into an auditable record.

AERIS

Team build · Real-time water · Live demo

A concept website built around water: a real-time WebGL ocean with ambient particles and responsive typography, designed and developed with a team.

The Lifetime Test

3D scrollytelling · Energy research · Live site

A cinematic, scroll-driven presentation of original battery-storage research, produced alongside a Samsung Solve for Tomorrow submission and Medium articles.

ACHIEVEMENTS & ACTIVITIES

Hackathon Wins

PeddieHacks and RLC Hacks, 2026

1st place, High School Sports (PeddieHacks) with SECOND LOOK, and Best Video (RLC Hacks) with GhostBus. Both shipped as working builds with public code.
Also: 1st place, CSC Back-to-School Hackathon, with Second Opinion; 2nd place, OregonHacks; Runner-up, Lake Oswego Hacks, with Dinner Count; Best Design and Future Innovator, Hack for Humanity, with Before I Tell; Top 5, Lovable challenge (TKS); RISE Research, $500.

Samsung Solve for Tomorrow

National Finalist, 2025

One of 12 national finalist teams across Canada with an aqueous magnesium battery proposal, awarded a $2,500 prize.

Technology & Energy Writing

Medium, 2026

Explainer articles on energy and engineering, including "Stationary Battery Storage Needs to Forget Everything It Learned from Smartphones."

Beyond the Screen

Ongoing

Composed and produced the original track "Troll Legacy" used as the portfolio soundtrack, competes in volleyball and badminton, and keeps building with robotics, 3D printing, and a Cricut.
